

Year 11 Science Trip

Museum of Science and Industry, Manchester

As part of the Creative Technologies curriculum students are given a client brief based on a vocational/real life situation.

Our level 2 learners have been asked to do the role of Sound Producer, Advertising and create a radio advert for The Science and Industry Museum in Manchester. An exhibit was for the 100 years of the BBC and learners saw a range of historical media equipment.

We visited MOSI this term and learners engaged well with the practical tasks in the Learning Zone, they discussed the science behind the experiments and thoroughly enjoyed this. The learners stated that either they had never been to a museum before or not since they were in primary school. It was lovely to see the learners fully engaged, laughing, communicating and working with each other.

As part of this unit learners should;

- Write a script
- Plan a short radio advert
- Create Advert
- Manipulate sound - music, effects, voice.
- Ensure product is appropriate for audience.

Learners behaviour was impeccable and they were a credit to the school.

Future trips, which learners have discussed and decided on are

- Turn It Up: The Power of Music (MOSI) Autumn 2 - November (new exhibit)
- Ordsall Hall - Autumn 2 - December
- Bradford Media Museum - Spring 2023
